Mål

INGET VÄRDE ANGIVET

Innehåll

This programme provides the student with extended depth of knowledge within the subject of Total Quality Maintenance and prepare for a professional career within industry. The aim of this programme is to provide students with an holistic approach to industrial systems, in particular those related to the manufacturing industry, its production, quality assurance routines and maintenance.

The programme combines theoretical studies with practical case studies in companies. During the first year the students own learning process is in focus in a case study. It is possible to change the last course into a project course that lets you as a student profile yourself.
