

Course syllabus

Faculty of Technology

Department of Building Technology

1BY072 Stål- och träkonstruktioner, 7,5 högskolepoäng

Steel and Timber Structural Engineering, 7.5 credits

Main field of study

Civil Engineering

Subject Group

Building Technology

Level of classification

First Level

Progression

G1F

Date of Ratification

Approved 2009-12-15

Revised 2016-06-09 by Faculty of Technology. Review of examination, objectives and contents.

The course syllabus is valid from autumn semester 2016

Prerequisites

Knowledge corresponding the contents of Building Technology I, Structural Mechanics, alternatively Mechanics of Materials, as well as Concrete Constructions.

Objectives

After completing the course the student is expected to;

- be able to dimension steel and wood constructions loaded by moments, shear and normal forces
- be able to check the function in the serviceability limit states
- have acquired an orientation of the project planning process for steel and wood constructions
- be able to make drawings for steel and wood constructions

Content

The course comprises the following elements:

Steel constructions:

- Current regulations
- Steel qualities
- Cross section classes
- Bending and shearing
- Axially loaded bar
- Pressure and simultaneous bending
- Checking steel constructions in ultimate limit states

- Checking steel constructions in ultimate limit states
- Bolted joints
- Welded joints
- Orientation on dimensioning against fire
- Steel qualities
- Cross section classes
- Bending and shearing
- Axially loaded bar
- Pressure and simultaneous bending
- Checking steel constructions in ultimate limit states
- Bolted joints
- Welded joints
- Orientation on dimensioning against fire
- Engineering design

Wood constructions:

- Current regulations
- Wood materials
- Bending and shearing in simple construction elements
- Axially loaded bar
- Pressure and simultaneous bending
- Checking wood constructions in ultimate limit states
- Wood joints
- Orientation on composite construction elements
- Wood construction systems

Type of Instruction

The teaching consists of lectures, exercises and project work.

Examination

The course is assessed with the grades U, 3, 4 or 5.

The project is giving 2,5 credits and is graded with U/G. The written exam is graded with grades U, 3, 4 or 5 which is also the final grade for the course.

Course Evaluation

During the course or in close connection to the course, a course evaluation is to be carried out. The result and analysis of the course evaluation are to be communicated to the students who have taken the course and to the students who are to participate in the course the next time it is offered. The course evaluation is carried out anonymously. The compiled report will be filed at the Faculty.

Credit Overlap

The course cannot be included in a degree along with the following course/courses of which the content fully, or partly, corresponds to the content of this course:BYA917

Required Reading and Additional Study Material

Required reading

Al Emrani, Mohammad, Johansson Peter, Stålbyggnad, Utdrag ur Al-Emrani M., Engström B., Johansson M, Johansson P (2008), *Bärande konstruktioner, Del 1 och Bärande konstruktioner del 2*, Institutionen för Bygg och miljöteknik, Avdelningen för konstruktionsteknik, Chalmers Tekniska Högskola.
