

Course syllabus

Faculty of Technology

Department of Computer Science and Media Technology

1DV56U Serverbaserad webbprogrammering, 7,5 högskolepoäng
Server-based Web Programming, 7.5 credits

Main field of study

Computer Science

Subject Group

Informatics/Computer and Systems Sciences

Level of classification

First Level

Progression

G1F

Date of Ratification

Approved by Faculty of Technology 2017-08-17

The course syllabus is valid from autumn semester 2017

Prerequisites

(Clientbased Web Programming (1DV022), and Web Technology 1 (1ME321) or equivalent) or (1DV525 Introduction to webprogramming)

Objectives

After completing the course the student should be able to:

- Describe the task of the web server in different kinds of web applications. (1)
- Describe the purpose of the HTTP-protocol in different kinds of web applications and its pros and cons in this context. (2)
- Create web applications with the platform Node.js.(3)
- Create web applications for handling persistent data where data can be saved, updated and deleted. (4)
- Describe and have a practical understanding of different security problems that can occur in web applications. (5)
- Create web applications with, for the context, suitable architecture. (6)
- Create server-based realtime applications. (7)
- Plan and to perform publishing of web applications created for the Node.js-platform in production environment. (8)

Content

The purpose of the course is that students will develop basic skills for web programming in the web server.

- The web server (different kinds and ways of working)
- The relationship between client and server in a web application
- HTTP
- The Node.js-platform and the asynchronous program modell
- Template engines for for server based HTML generation
- Attack vectors in a web application like CSRF, XSS and different types of injection attacks
- RESTful architecture for web applications
- Persistant storage in document databases through a ODM (Object Document Mapper)
- Publishing of web applications in production enviroment for the Node.js-plattform
- Server side cookies and JSON Web Token
- Caching on the web server
- Web Sockets

Type of Instruction

Teching is in the form of lectures with different forms of learning activities and labs. Theory combined with practical applications in problem solving oriented towards construction of client-based web applications. The course can be studied at campus or remotely. The studies requires own access to a computer, headset, webcam and internet connection.

Examination

The course is assessed with the grades A, B, C, D, E, Fx or F.

The grade A constitutes the highest grade on the scale and the remaining grades follow in descending order where the grade E is the lowest grade on the scale that will result in a pass. The grade F means that the student's performance is assessed as fail (i.e. received the grade F).

Test 1 (1 credit): Goal 1-3 is examined through oral examination of a programming problem. The grades Fail (U), Pass (G) is applied.

Test 2 (3 credits): Goals 3-6 are examined through oral examination of a programming problem. The grades A-F is applied.

Test 3 (3.5 credits): Goals 6-8 are examined through oral examination of a programming problem. The grades A-F is applied.

Course Evaluation

During the course or in close connection to the course, a course evaluation is to be carried out. The result and analysis of the course evaluation are to be communicated to the students who have taken the course and to the students who are to participate in the course the next time it is offered. The course evaluation is carried out anonymously. The compiled report will be filed at the Faculty.

Credit Overlap

The course cannot be included in a degree along with the following courses of which the content fully, or partly, corresponds to the content of this course: 1DV023 Server-based Web Programming, 7.5 credits

Other

Grade criteria for the A–F scale are communicated to the student through a special document. The student is to be informed about the grade criteria for the course by the start of the course at the latest

start of the course at the latest.

Course learning resources are open through the course's public website.
