

## Course syllabus

Faculty of Technology

Department of Physics and Electrical Engineering

1TG211 Teknikhistoria, 7,5 högskolepoäng

History of Technology, 7.5 credits

### **Main field of study**

Technology

### **Subject Group**

Other Subjects within Technology

### **Level of classification**

First Level

### **Progression**

G1F

### **Date of Ratification**

Approved 2009-12-01

Revised 2017-11-13 by Faculty of Technology. Removal of ECTS-grading scale.

The course syllabus is valid from spring semester 2018

### **Prerequisites**

Technology for Secondary School Teachers 7.5 credits (1TG121) or the equivalent.

## Objectives

Having completed the course the student is expected to be able:

- to describe important happenings and events in the history of technology and their importance for human life and social development
- to present what has been characteristic and decisive for technological and industrial development
- to describe the interplay between technical development and changes in society
- to describe how large technical systems are established and change and how these systems affect the development of society in general
- to describe and reflect upon the different didactic choices with regard to local and national governing documents.

## Content

The course should offer the students an overview of the history of western technology in a long-term perspective. Special attention is devoted to major changes and important epochs: the origin and emergence of agriculture, the background to and emergence of the industrial revolution, the development of new technologies and various technical systems, technology as a tool to master nature.

Students will be given the opportunity to work in a practical manner with the history of technology. The creation of teaching situations where pupils are made aware of how technology has affected historical developments is an important part of the course.

Local and national governing documents are important sources used in the course. Didactic theories are integrated in all course moments.

## Type of Instruction

The course is a distance tuition course via the Internet. The students are expected to work individually and in groups. At the start of the different modules of the course the course leader/teacher presents specific reading tasks, study assignments and presentation models. Work assignments may be presented collectively in the form of group conferences and commented on by the course leader/teacher. The work assignments may also be individually designed.

Attendance at examinations and seminars is obligatory.

## Examination

The course is assessed with the grades Fail (U), Pass (G) or Pass with Distinction (VG).

Assessment takes place through oral and/or written tests and/or presentations of compulsory assignments, as well as through participation in web-based seminars. The main form of examination is decided at the start of the course.

Students who do not pass the regular examinations are offered a new chance in close connection to time of the regular examination

## Course Evaluation

During the course or in close connection to the course, a course evaluation is to be carried out. The result and analysis of the course evaluation are to be communicated to the students who have taken the course and to the students who are to participate in the course the next time it is offered. The course evaluation is carried out anonymously. The compiled report will be filed at the Faculty.
