Faculty of Social Sciences

Department of Education and Teachers' Practice

1YL003 Yrkeslärande, kunskapsutveckling och specialpedagogik,
15 högskolepoäng

1YL003 Vocational Learning, Knowledge and Special Education, 15
credits

Subject Group

Educational Sciences/General Didactics

Level of classification

First Level

Progression

G1N

Date of Ratification

Approved 2012-02-06

Revised 2022-12-14 by Faculty of Social Sciences. Editorial alterations.

The course syllabus is valid from autumn semester 2023

Prerequisites

General entry requirements and qualifying and relevant professional competence acquired through professional experience, higher education or other post-secondary education. Placement studies through the course 1YL002 The Vocational Teacher and the Student.

Objectives

General education studies, 12 credits.

Upon completion of the course, students shall be able to:

- in relation to their own professional field and by the use of educational theories and didactic considerations, argue for the choices made during planning and implementation of learning situations,
- account for different perspectives on learning and development, as well as critically discuss in what ways the diverse living conditions of pupils may affect their possibilities to learn,
- account for and problematise learning and socialisation in the lifelong perspective by the use of concepts such as identity, gender, social class and ethnicity,

- explain and adopt a critical approach to concepts and phenomena with regard to normality and deviance in relation to the inclusion and exclusion phenomena in school and education, and account for the consequences these aspects might have at the organisational, group, and individual level,
- account for special educational perspectives and explain their educational meanings with respect to meeting the teaching assignment requirements on being able to acknowledge pupils' individual differences in the educational setting,
- apply research ethical principles at the planning of analyses, as well as use interviews and observations as a method for collection and basis of data.

Placement studies, 3 credits

Upon completion of the course, students shall be able to:

- describe the characteristics of their own professional competence, and illustrate how its theoretical and experience-based aspects can be described in relation to other professions and vocational education.

Content

The course is based on the students' previous professional experiences, and the students' own learning is focused on. The course content covers theories of learning, general didactics and vocational didactics, with the emphasis on learning environments and teaching in the vocational education and training in upper secondary schools. On the basis of descriptions of their own experience-based knowledge and vocational learning, students develop tools to use in order to refer to vocational didactic consequences for teaching and to acknowledge pupils' individual differences.

The course emphasises the development of the individual and the significance of diverse social conditions in an educational context. The relationship between school-individual-society is analysed with respect to reproduction patterns in which gender, class and ethnicity are emphasised. In the course, youths are also discussed as a group and the concept of youth is looked into from a historical, social and cultural point of view, which is linked to issues regarding socialisation and formation of identity, and how this can be put in relation to pupils' learning and development. Digital media and its importance to young people's sense-making is problematised, as well as possible consequences of using digital media in young people's learning processes.

The course covers different theories of normality and deviance. Phenomena such as diagnosing and categorising pupils are discussed on the basis of historical as well as current societal perspectives. Furthermore, the course discusses the kind of function that diagnosing and categorising pupils have at the group and organisational level, as well as the consequences of the same for pupils' development and identity formation. Different concepts of normality are discussed, and how the school as an institution contributes to creating conceptions of normality and deviance within various areas.

Special emphasis is placed on special educational knowledge and support related to social vulnerability and disabilities in the educational work. Special educational perspectives are problematised and the possibility to prevent and eliminate difficulties in school concerning teaching is looked into and evaluated with regard to the mission of establishing democratic learning processes. The organisation of the educational activities is illustrated on the basis of a relational perspective, where cognitive as well as emotional dimensions are taken into account in the instructions. Critical aspects with regard to the work on action programmes are dealt with and analysed and how this can

be related to the promotion of increased goal attainment for pupils in need of special support.

Fiction is studied in the course, which deals with pupils' diverse social conditions and often complicated childhood living conditions, aimed at developing a deeper understanding of the complex professional mission regarding acknowledging pupils' individual differences and finding varying and creative educational strategies.

Professional Basis and Professional Progression

In the course, the concept of professional knowledge is deepened through discussions and problematisation of teachers' professional knowledge by the use of scientific studies of teacher professionalism, through observations of and meetings with teachers, and by reflecting on their own experience-based professional competence.

Students gain a deeper image of the teaching profession's complexity, with the emphasis on such areas of the activities that concern pupils' health, student welfare situations and different forms of support and resources for pupils, such as action programmes and individual study plans.

In addition to studying learning environments and teaching, focus is put on special educational needs and the possibilities that teachers have in terms of observing and acknowledging pupils' individual differences in the educational setting.

Scientific Approach and Scientific Progression

The project work included in the course is aimed at describing and illustrating young people's vocational learning by the use of theoretical perspectives presented in literature and lectures. In the course, students develop their ability to plan and participate in project work, as well as make use of the dialogue seminar method for collection of data concerning practical knowledge and professional competence. The research methodical practice emphasises research ethical principles and how to use interviews as a method and basis for qualitative analysis of data.

Type of Instruction

Teaching is conducted in the form of student placement training, lectures, project work, seminars and the like. Instruction is given in Swedish.

Examination

The course is assessed with the grades Fail (U), Pass (G) or Pass with Distinction (VG).

Examination takes place through logbook, two seminars, observation assignment, group assignment, pair assignment, reflection protocol, and two written individual assignments.

Examination of the placement studies (VFU) takes place in consultation with the placement teacher in the activities. For the course component of placement studies, the grades Pass and Fail are applied.

In order to receive a grade of Pass, the course objectives must be fulfilled. In order to receive a grade of Pass with Distinction, it is required that the student has received this grade on both the written individual assignments.

A retake of the examination is provided in accordance with the Local Regulations for First-Cycle and Second-Cycle Courses and Examination at Linnaeus University.

Should the university determine that a student is entitled to special educational support due to impairment, the examiner may provide the student with an adapted test or the student may carry out the examination in an alternative way.

Course Evaluation

A course evaluation is carried out either during or at the end of the course. Results and analysis of the evaluation are presented to the students who have completed the course, as well as to new students at the following course date. The course evaluation is conducted anonymously.

Other

Any additional costs that may arise in connection with the course are paid for by the students themselves. Students who fail the practical part of the course have the right to retake the placement studies one more time, unless two examination opportunities have already been used. An examiner may decide that a student's placement training shall be discontinued, to take effect immediately, if the student in question demonstrates such serious lack of knowledge, skills or approach that the safety or integrity of the pupils or the confidence of parents is jeopardized. If the student placement training is discontinued in this manner, the student fails the course and one of the placement opportunities has thus been used.
