gymnasieskolan, 7,5 högskolepoäng

Development and Learning for Upper Secondary Teachers, 7.5
credits, 7.5 credits

Main field of study

Didactics

Subject Group

Educational Sciences/General Didactics

Level of classification

First Level

Progression

G2F

Date of Ratification

Approved by Faculty of Social Sciences 2019-09-04

The course syllabus is valid from spring semester 2020

Prerequisites

Subject-specific studies comprising 60 credits in one of the subjects within the teacher education for upper secondary school, or the equivalent.

Objectives

The aim of the course is that students shall develop a reflective approach to and knowledge of youth learning and development, as well as develop a basic didactic competence for professional practice in upper secondary education.

After completing the course, students shall be able to:

- account for and compare different theories of development and learning, as well as discuss any educational consequences of the same,
- account for and discuss what kind of impact young people's diverse conditions and learning environments may have on the possibility to learn,
- account for scientific views on the concept of knowledge, as well as discuss and give examples on similarities and differences between different knowledge traditions and their consequences as regards the educational practice,
- account for the importance of a teacher's communicative skills as in listening, speaking and writing, as well as demonstrate a practical ability to take into account formal requirements and linguistic accuracy,
- account for and independently evaluate and apply research ethical principles in relation to observations of the educational practice,
- on the basis of a scientific approach and theoretical perspectives on learning, independently formulate a presentation of a problem in order to observe,

document and analyse learning activities in different educational learning environments.

Content

The course discusses scientific theories, educational traditions and practices that concern youth development, learning and knowledge with the emphasis on the pupils' upper secondary studies. On the basis of the theories discussed in the course, the educational activities are put in relation to societal, social and organisational factors, as well as to young people's diverse conditions and needs.

The main focus for future teachers is the theories of learning and how this may take place in different situations. The course covers a number of theories of learning, such as behavioural, cognitive and sociocultural perspectives. Furthermore, different scientific theoretical views on how knowledge may be perceived and defined are also discussed, as well as the implications that various views on development, learning and knowledge may have on the organisation and implementation of educational activities.

The course content also consists of psychological and sociological theories of and perspectives on youth development. Issues with regard to education, socialisation and upbringing are included. The interaction between pupils and teachers, as well as with other school personnel and custodial parents is illustrated. The pupil's perspective as well as the teacher's perspective is discussed.

During the course, its main themes are discussed - development, learning and knowledge in relation to different perspectives such as socialisation, gender, social class and ethnicity.

In relation to field studies, a presentation of a problem is formulated, which forms the basis of observations of the educational activities with the emphasis on the pupils' development and learning. These observations are documented, analysed and presented in writing as well as orally.

Professional Basis and Professional Progression

During the field studies, students gain an insight into the conditions of the profession on the basis of a spectator perspective, as a supplement to the discussions in the course on the teaching profession's tasks and conditions. The course emphasizes the importance of having a professional and scientific approach where the development of knowledge and judgement is intended to strengthen the students' ability to reflect on and act in adequate manners in relation to young people's learning and the school's mission. Elements such as presentations and discussions in smaller as well as larger groups are included, with the purpose of developing the students' communicative skills and sense of assurance.

Scientific Approach and Scientific Progression

In the course are presented scientific theoretical perspectives and different views on scientific knowledge. The course covers observation as a scientific method, and the students learn how to carry out, process and present their observations during the field studies. Furthermore, parts of a research process dealing with formulating a presentation of a problem are also discussed.

Type of Instruction

Teaching is conducted in the form of lectures, seminars, films, individual as well as group assignments, and field studies.

Examination

The course is assessed with the grades Fail (U), Pass (G) or Pass with Distinction (VG).

Examination takes place by means of a written exam, a written assignment and active participation in seminars and group presentations.

In order to receive a grade of Pass, all the course objectives must be fulfilled. In order to receive a grade of Pass with Distinction in the entire course, this grade is required for the written individual assignment.

A retake of the examination is provided in accordance with the Local Regulations for First-Cycle and Second-Cycle Courses and Examination at Linnaeus University.

Should the university determine that a student is entitled to special educational support due to impairment, the examiner may provide the student with an adapted test or the student may carry out the examination in an alternative way.

Course Evaluation

A course evaluation is carried out either during or at the end of the course. Results and analysis of the course evaluation are presented to the students who have completed the course, and to the students at the following course date. The course evaluation is conducted anonymously.

Other

This course is included in the Teacher Education Programme for Upper Secondary School. Any additional costs that may arise in connection with assignments or the like are paid for by the students themselves.
