

Course syllabus

Faculty of Technology

Department of Physics and Electrical Engineering

4ED395 Frågeställningar inom vågutbredning och hållbarhet, 7.5 credits

Topics in wave propagation and sustainability

Main field of study

Electrical Engineering

Subject Group

Electrical Engineering

Level of classification

Second Level

Progression

A1N

Date of Ratification

Approved by Faculty of Technology 2022-05-16

The course syllabus is valid from spring semester 2023

Prerequisites

Bachelor Degree in Electrical Engineering, Computer Engineering, Engineering Physics or the equivalent, English 6 or equivalent.

Objectives

The course covers some central concepts of wave propagation and sustainability and is intended as a preparation for the thesis project. Upon completion of the course, the student should:

- be able to combine knowledge of physics and electrical engineering in order to obtain a deeper understanding
- have the ability to solve problems at the advanced level that may also require programming in some form.

Content

The course covers the following topics with possible adjustments for visiting researchers:

- Climate models with numerical elements
- Mobile systems and the link to smart grids
- Software radio applied to distance measurement

Type of Instruction

Lectures and written assignments.

Examination

The course is assessed with the grades A, B, C, D, E, Fx or F.

The grade A constitutes the highest grade on the scale and the remaining grades follow in descending order where the grade E is the lowest grade on the scale that will result in a pass. The grade F means that the student's performance is assessed as fail (i.e. received the grade F).

The examination is in the form of written assignments.

Repeat examination is offered in accordance with Local regulations for courses and examination at the first and second-cycle level at Linnaeus University.

If the university has decided that a student is entitled to special pedagogical support due to a disability, the examiner has the right to give a customised exam or to have the student conduct the exam in an alternative way.

Course Evaluation

During the implementation of the course or in close conjunction with the course, a course evaluation is to be carried out. Results and analysis of the course evaluation are to be promptly presented as feedback to the students who have completed the course. Students who participate during the next course instance receive feedback at the start of the course. The course evaluation is to be carried out anonymously.

Credit Overlap

The course cannot be included in a degree along with the following course/courses of which the content fully, or partly, corresponds to the content of this course: 4ED094 Topics in wave propagation, 7.5 credits, 4ED394 Topics in wave propagation, 7.5 credits

Other

Grade criteria for the A–F scale are communicated to the student through a special document. The student is to be informed about the grade criteria for the course by the start of the course at the latest.

Required Reading and Additional Study Material

Required reading

Current scientific articles. Pages 25 (25).

FTK, Distributed material. Pages 50 (50).
